What is the Census?

The Census is a collaborative research project that started in 2002.

Although the BRC Census is technically a survey and not a real census (where everyone in a population was sampled), we aspire to be a true census where everyone voluntarily participates. Until that day, we will continue to provide the most complete picture possible of the highly diverse population of Black Rock City.

Method

- Based on analysis of 11707 surveys filled out online after the event in 2014 (roughly 1 in 5.5 citizens!)
- This is roughly the same proportion of useful data as the 2012 and 2013 surveys
- This is the 3rd consecutive year in BRC history that these results were weighted to correct for non-response biases.
 - *Implication: these results are the most reliable estimates available concerning the BRC population*
- Project was approved by a research ethics committee (@ Denver University) and confidentiality of respondents is protected

Details about the weighting procedure

- As with 2012 & 2013, the 2014 BRC Census created an “unbiased” reference by randomly sampling cars at the gate during ingress, asking nine sociodemographic questions of each sampled burner who accepted.
- In addition, we surveyed entering Burner Express Riders to add their data to the weighting procedure.
- The weighting procedure corrects the biases in the after-event, online survey due to self-selection. (i.e., burners who decided to fill out the Census might be different from those who chose not to fill it out)
- In population surveys, the national census is used as a reference to weight (i.e., adjust) each survey.
- Thus, the results from 2014 Census were weighted according to this random sampling at Gate and Burner Express, improving the collective accuracy of the data.

2014 Census Results

- This presentation covers the descriptive results for the most important questions.
- The first section of results contrasts the weighted (i.e., corrected results) and the unweighted (i.e., original but biased) results to help understand the usefulness of the procedure.
- The remaining sections present only the weighted results.
- These results are the most reliable estimates that we have of the Black Rock City population.
- The “real” population values could be slightly different from the presented values due to measurement error.
- For more results, visit us on the playa (near Center Camp) and follow the Census Lab’s blog at
<http://blackrockcitycensus.wordpress.com>

Weighting the Census

Variables used to weight the 2014 Census

- Inherent self-selection bias in past surveys
- 2014 complemented census with a random sampling at the gate
- Random sample allowed us to weight the collected data
- Variables used to weight the 2014 Census:
 - Day of arrival versus number of participants arriving
 - Gender
 - Age
 - Virgin Burner or not
 - Foreigner or not
 - English Speaker as a first language or not
 - US Party Affiliation (if eligible to vote in the US)
 - Voting Behavior

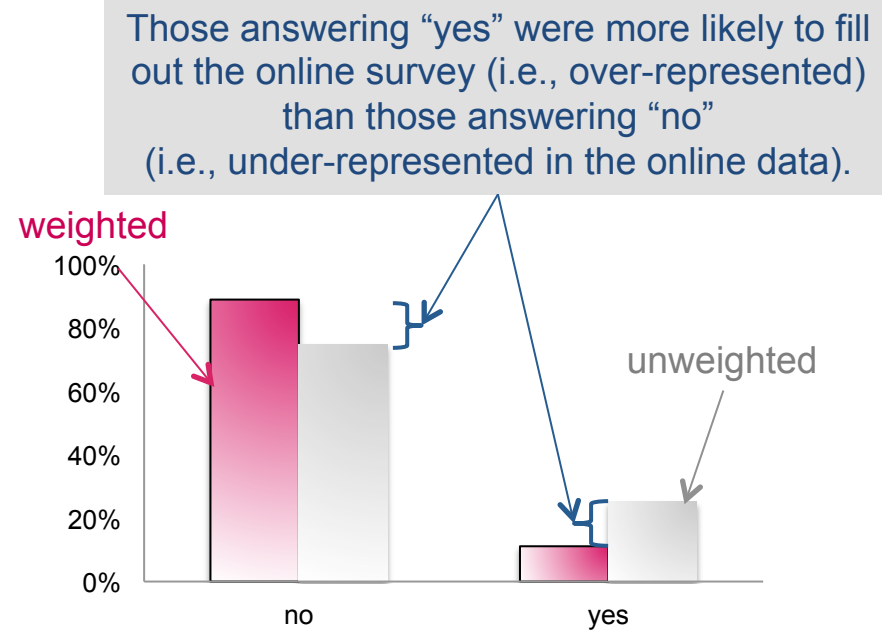

Details about the weighting procedure

- As with 2012 & 2013, the 2014 BRC Census created an “unbiased” reference by randomly sampling cars at the gate during ingress, asking nine sociodemographic questions of each sampled burner who accepted.
- In addition, we surveyed entering Burner Express Riders to add their data to the weighting procedure.
- The weighting procedure corrects the biases in the after-event, online survey due to self-selection. (i.e., burners who decided to fill out the Census might be different from those who chose not to fill it out)
- In population surveys, the national census is used as a reference to weight (i.e., adjust) each survey.
- Thus, the results from 2014 Census were weighted according to this random sampling at Gate and Burner Express, improving the collective accuracy of the data.

Understanding this section

- In this section, we illustrate the weighted data based on the random sample and compare it against the unadjusted data of the convenience sample (online survey).
- Annotations of “over-represented” or “under-represented” are highlighting areas that have statistically significant differences between the weighted random sample data and the unweighted convenience sample data.

The **PINK** bars represent the results adjusted based on the random sample.

The **GREY** bars represent the unadjusted convenience (online survey) sample

Weighting Variables

Gender

■ unweighted ■ weighted

Males slightly under-represented

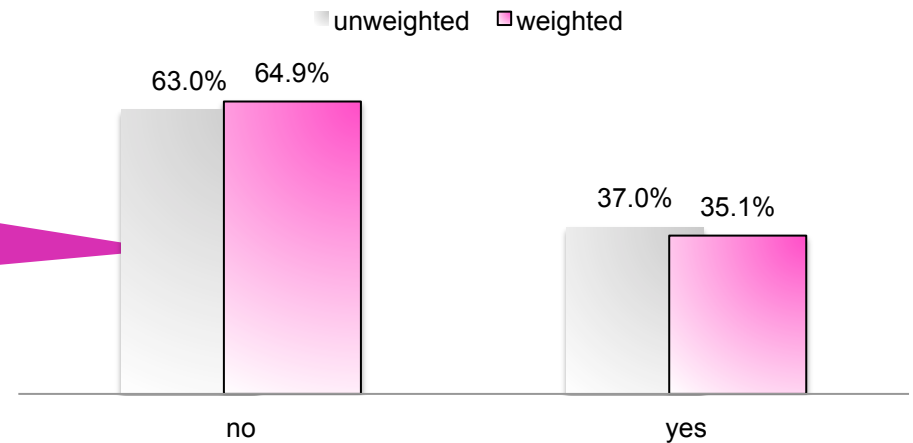

Females slightly over-represented

Weighting Variables

Virgins slightly over-represented

Virgin

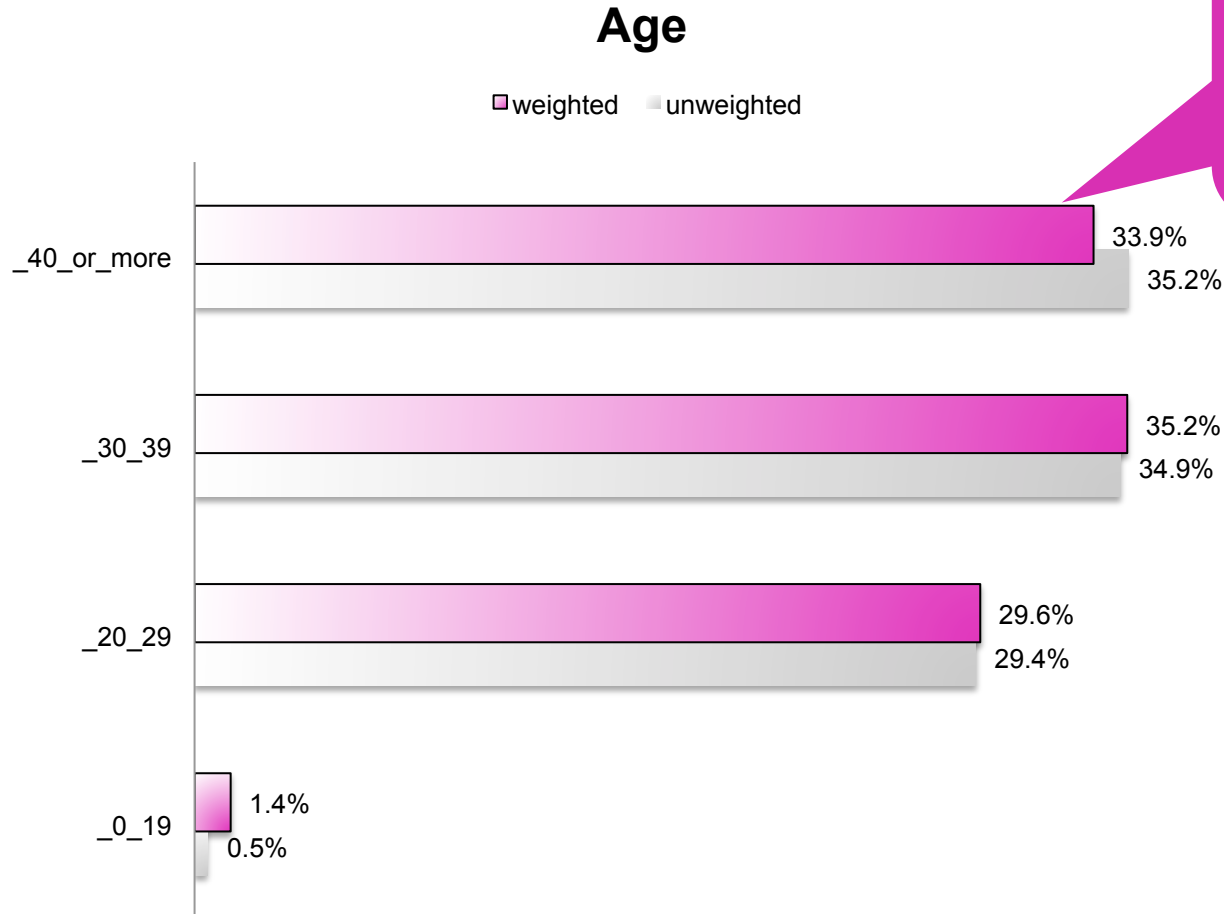

Number of Burns

Newbies (0-1 burns) over-represented

Weighting Variables

Oldest age group
over-represented

Youngest age group
under-represented

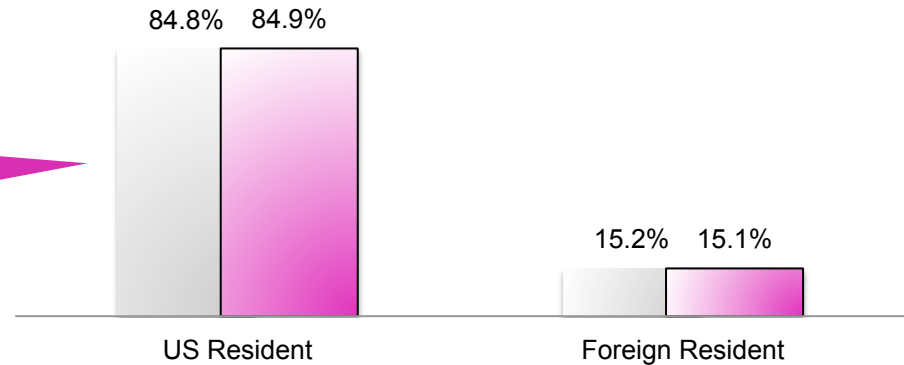

Weighting Variables

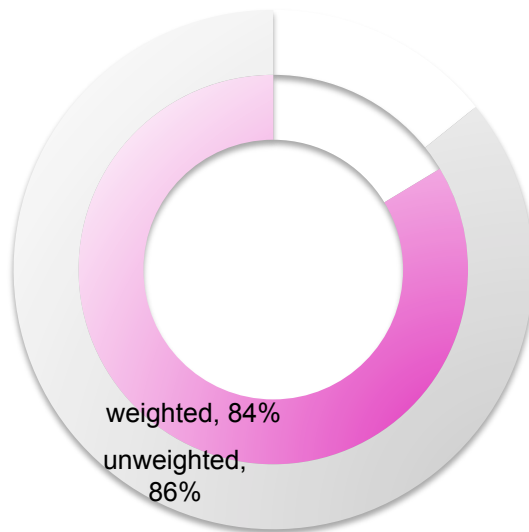

US vs Foreign was
not a bias in the
survey

US Residents

unweighted weighted

English as a Primary Language

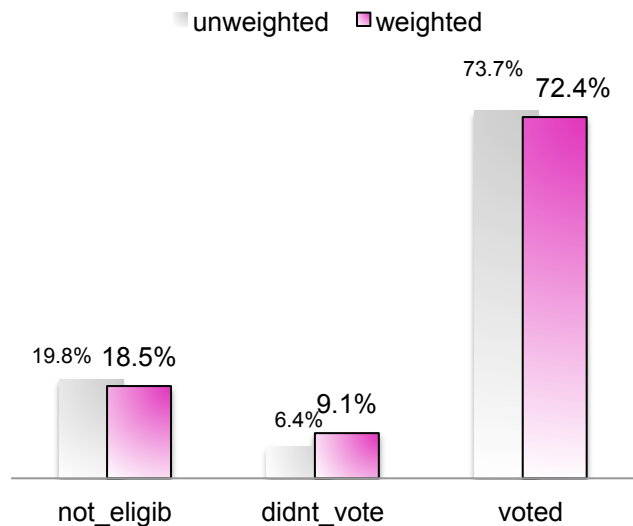

English speakers were
slightly over-represented

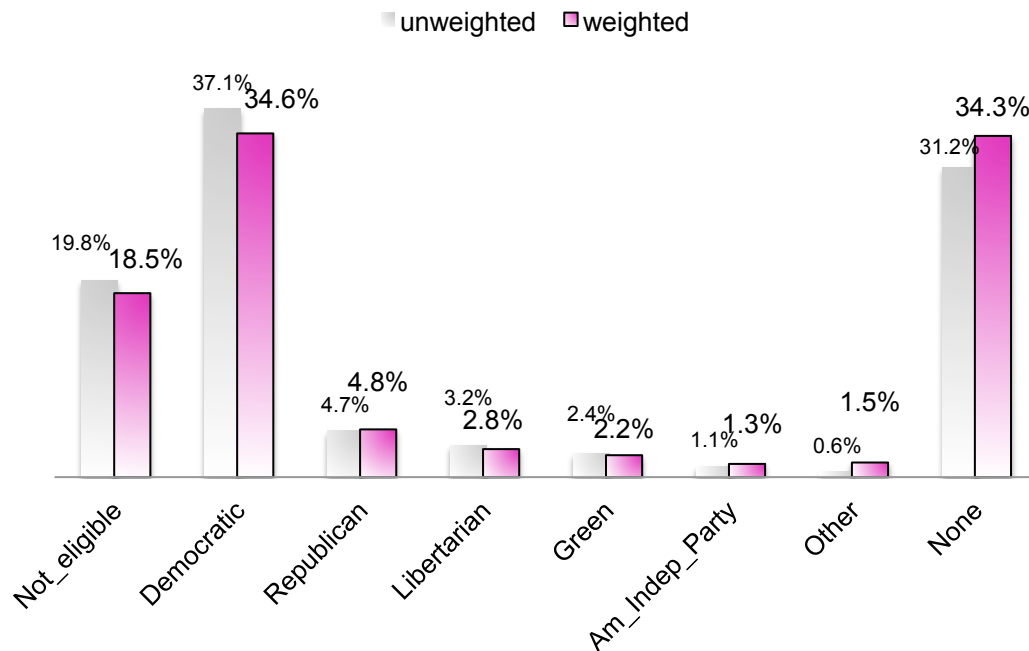

Weighting Variables

Eligible to Vote

US Party Affiliation

Those eligible but didn't vote,
Independents or have no party
affiliation were under-represented

Libertarians, Democrats, Green &
those not eligible were over-
represented

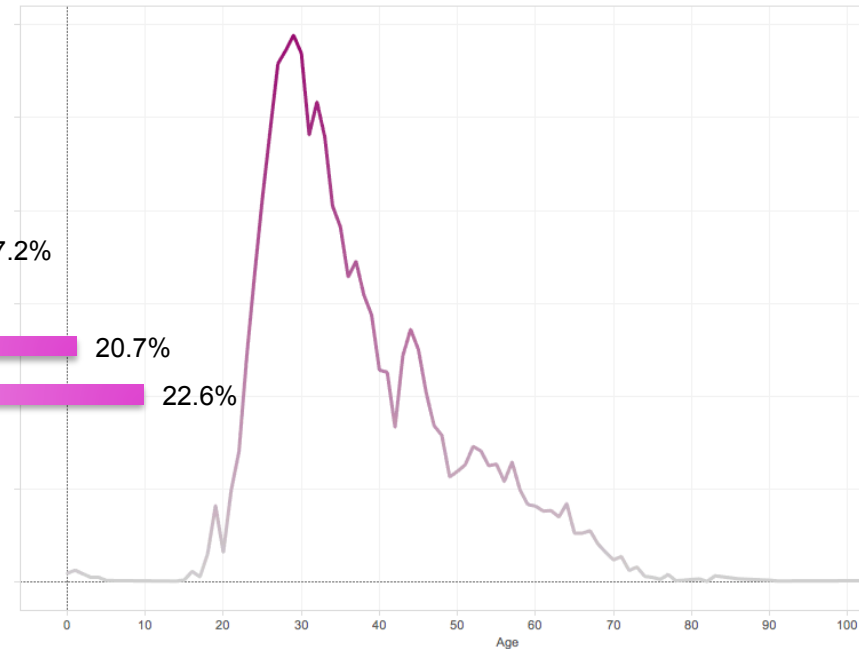

Sociodemographic Characteristics

Sociodemographic Characteristics

Age Group

Income

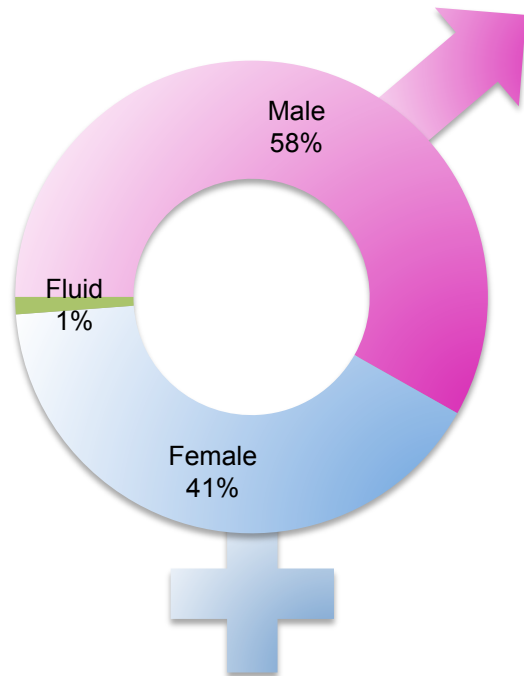

Median Age: 34
Median Personal Income: \$54k-\$55k

Sociodemographic Characteristics

Gender

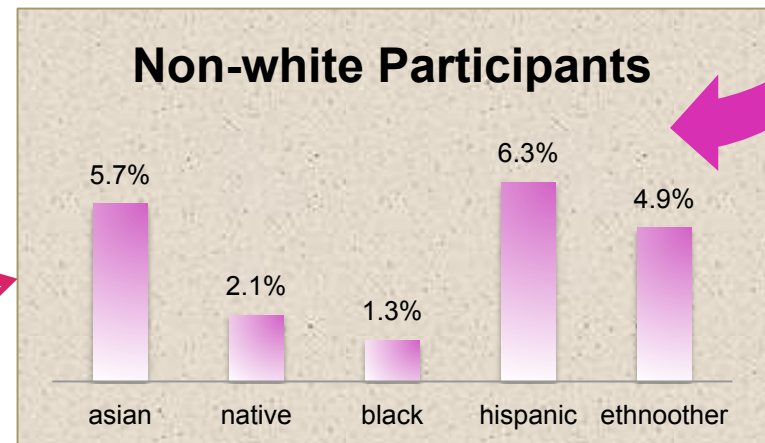

Includes respondents who may have checked more than one answer

White

Non-white Participants

Sociodemographic Characteristics

Education (Highest Degree Earned)

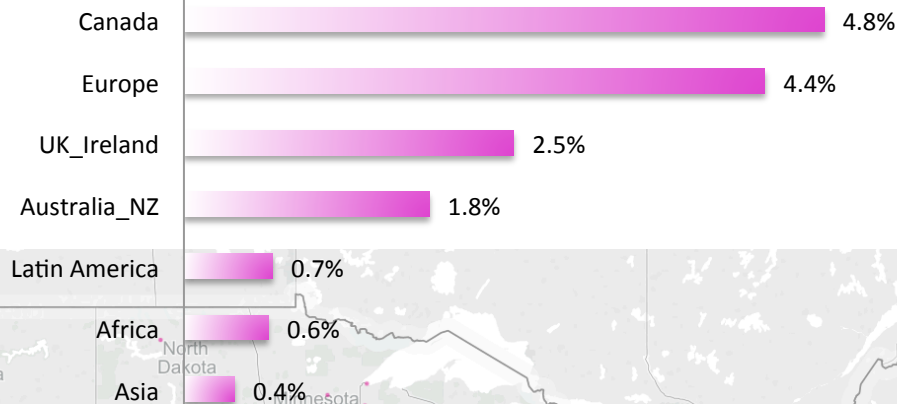

Sociodemographic Characteristics (USA)

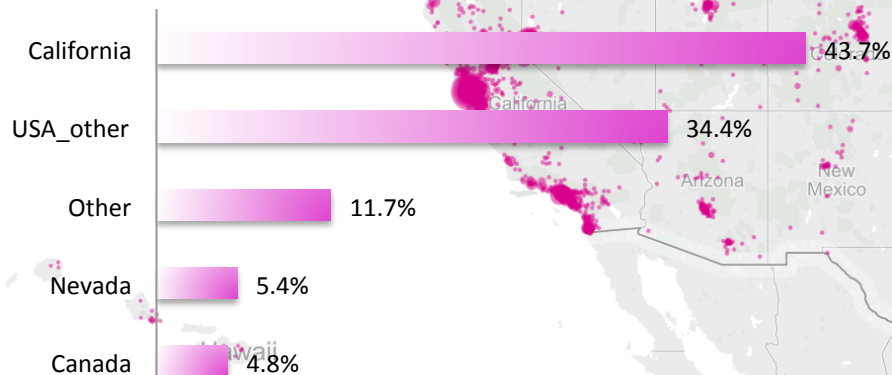

Population from US

83.5%

Country Other than US

State (Country) of Residence

United States

Sociodemographic Characteristics

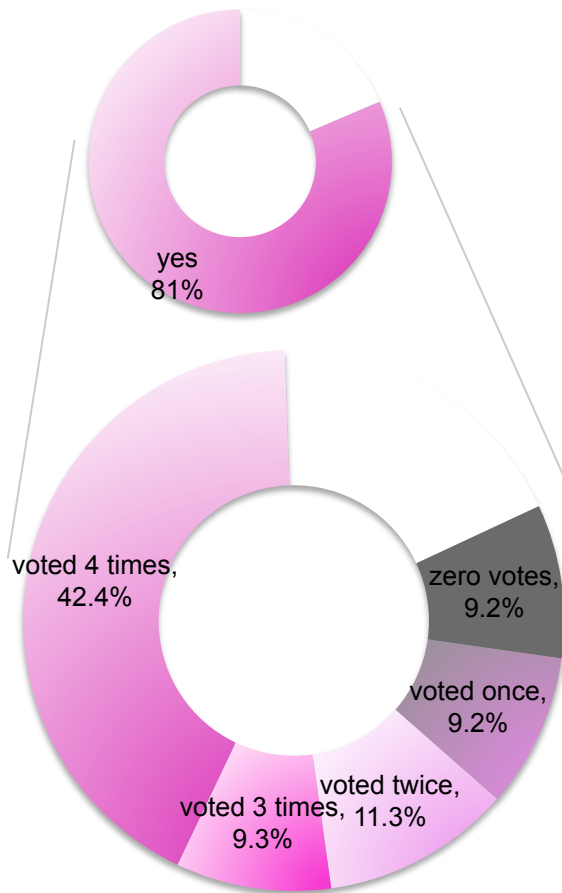

Primary Language other than English

Sociodemographic Characteristics

Eligible to Vote

Voting Probability

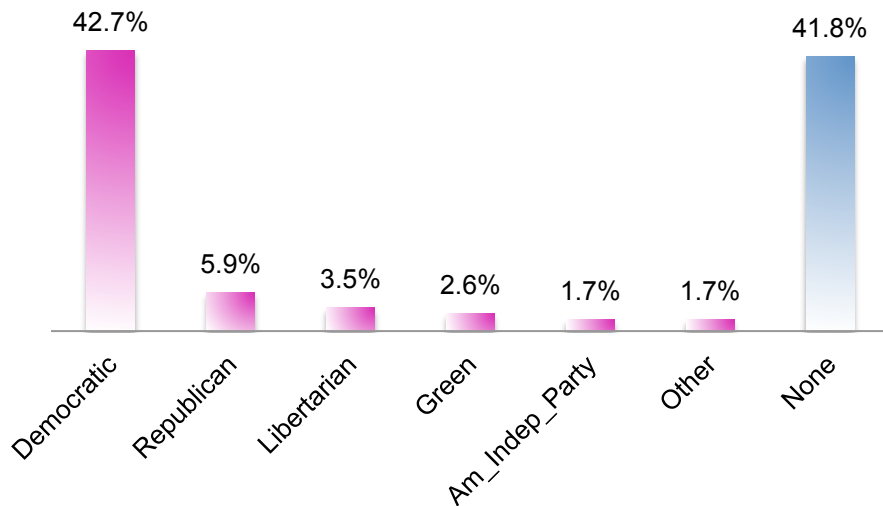

Over 52% of Eligible Burner Voters have voted in each of the past 4 elections

77% of Burners who are eligible to vote have voted in at least 2 of the last 4 elections

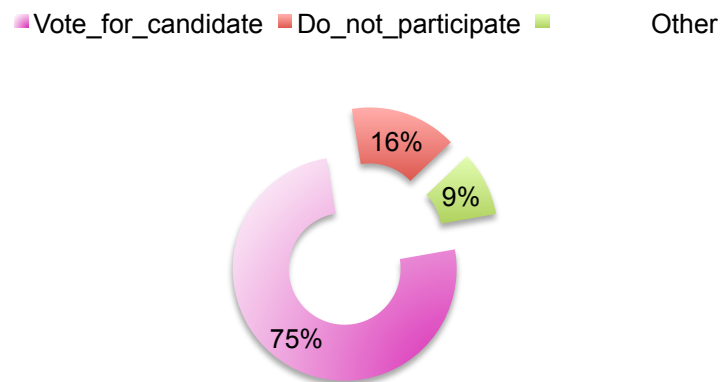

Sociodemographic Characteristics

Party Affiliation if Eligible

Reason Independent

If unaffiliated, how did you vote?

Party Affiliation

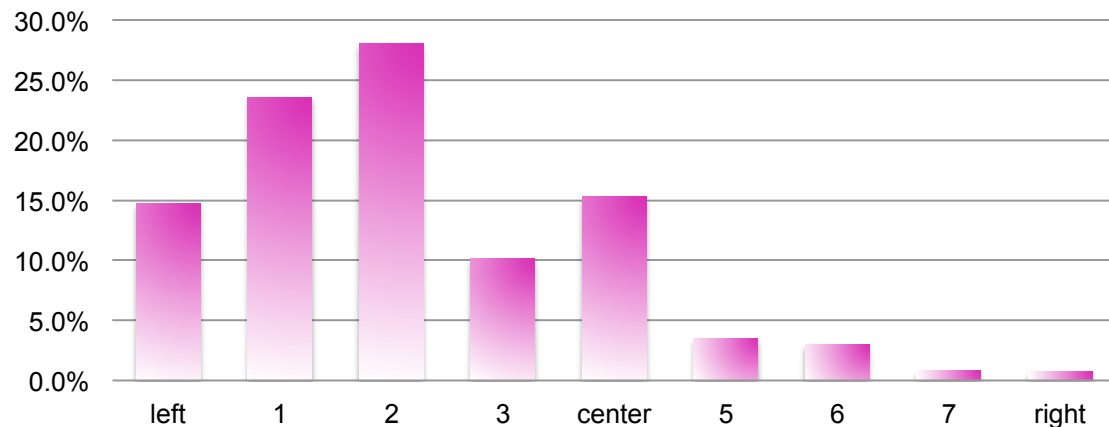

Large Burner bias toward Democratic Party

Even those claiming no affiliation overwhelming voted Democratic

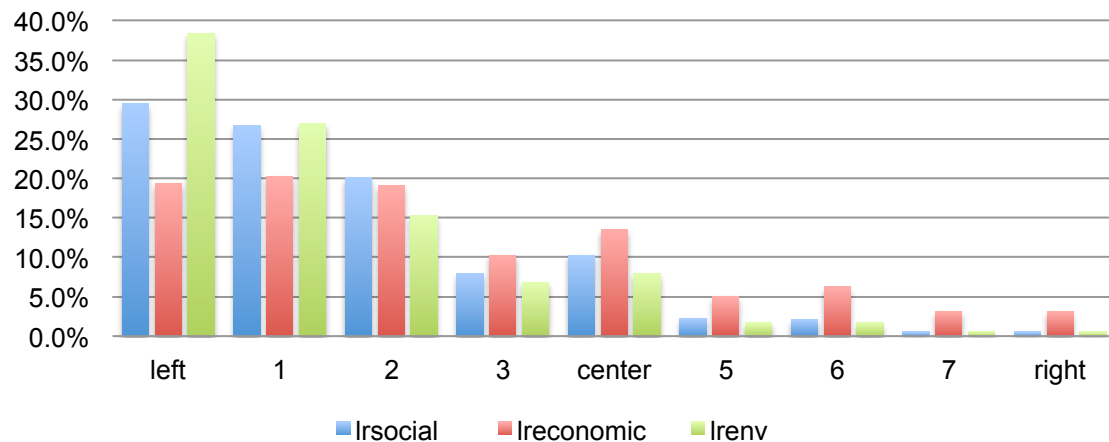

Sociodemographic Characteristics

Left vs Right Self Assessment

Left-Right by Topic

Left-vs-Right

Burners tend to
classify themselves
as Left-of-Center

More strongly Leftist
sentiment around
Environmental and
Social issues

Sociodemographic Characteristics

Number of Burns

Virgin?

Improvements in Weighting Procedure Impacted this Measure Significantly

Virgins -6% from preliminary results

Burning Man Related Variables

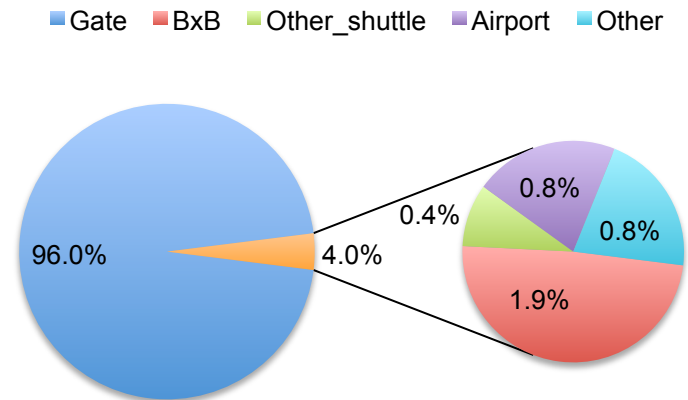

Burning Man Related Variables

Arrivals and Departures

How did you enter BRC?

Number of children in your vehicle

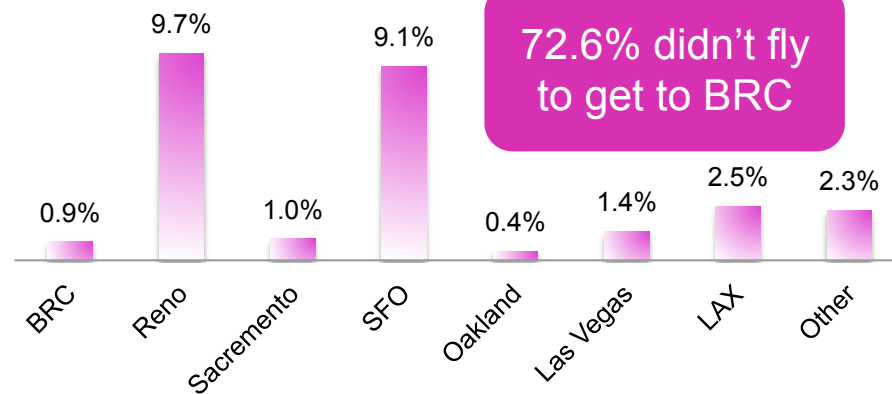

Burning Man Related Variables

Number in Vehicle

If you flew, what airport?

72.6% didn't fly to get to BRC

Type of Vehicle

Projected Average # Miles Driven / Burner is ~272miles with a reported 19.7 MPG
Roughly 6.3 Million Miles Consuming around 320,000 gallons of gas to get to BRC

Burning Man Related Variables

Number of Family Members With You

Have you brought children under 18 to BRC?

How do you feel about children under 18 in BRC?

Do you think that children are safe in BRC?

Impact on Nevada

Nevada Spending

Average stated
spending in Nevada is
~\$639/Burner

Where Burner's spent their Nevada \$'s

Visit a Park in Nevada?

What information do you value most?

Ever attended a BM Regional event?

Burning Man Specific Variables – WWW

Did you use the WWW Guide?

How Useful was the WWW Guide?

What, Where, When continues to be popular for people as a souvenir almost as much as an On-Playa Guide

Identity & Self

Sexual Orientation and Attraction

Sexual Orientation

In regard to sexual attraction, reported heteronormativity persists within the Burning Man population. This ideology is reflective of distributions in the default world with men reporting less fluidity in sexual attraction than females.

Religion

71.8% of Burners do not identify with an organized religion. Burners that do identify with an organized religion are most likely to report being Catholic and least likely to report being Muslim.

Report of Judgment and Unfair Treatment

42.1% of Burners report being worried about judgment or unfair treatment based on their participation in Burning Man

Main Reasons to Go to Burning Man

Contributions and Acknowledgements

Contributions and acknowledgements

Project coordination:

Megan Heller (Countess), David Nelson-Gal (Scribble), Dominic Beaulieu-Prévost (Hunter) and Kateri McRae (Variance) are the principal investigators who led the 2014 Census project.

Sampling & data analysis:

Dominic Beaulieu-Prévost (Hunter)

Report coordination, graphics, layout & design:

David Nelson-Gal(Scribble) & Andrew Pedersen

The 2014 Census Lab :

The project also involved numerous other volunteers whose contributions were essential in many ways : research collaborators, volunteer coordinators, statisticians, camp builders, gate samplers, keypunchers, census lab hosts, graphic designers, and many more. These contributors will globally be referred to as “the Census Lab”. We would also like to thank the Burning Man organization for the resources that they provided both on playa and off playa and for believing in the project.

Special thanks to Entropy for rescuing our volunteers at Gate on stormy Monday.

A final thanks to all the BRC citizens who contributed to the 2014 Census. The Census project could not exist without you.

Still Curious?

For more information about the 2014 Census project or the people involved in the project, please write to census@burningman.org .

For more information about this report, please write to Dominic Beaulieu-Prévost at beaulieu-prevost.dominic@uqam.ca .
